

Percussion Website Kickstart Program

Percussion's Kickstart Program is designed to take our proven Coach to Live program and take it to the next level of service for marketers who want the white glove approach to getting their websites live fast.

Our customers are most successful when the people who are directly responsible for the ongoing management of the Content Management System are involved with the implementation of Percussion CM1.

Percussion's Kickstarter package is designed to take the necessary steps to get your site launched on CM1 while empowering you to successfully manage the environment post launch.

Unlike traditional turnkey implementations, at the end of 90 days, you will have a fully functional website as well as a complete understanding of how it was built and how to successfully manage it moving forward.

The Kickstart Standard Package Includes:

- Actively Coach you through the installation process of Percussion CM1 in your ideal environment (cloud or on premise)
- Importing your site with LiveFirst onto Percussion CM1
- Breaking down your existing design
- **Building 9 Mobile Responsive Templates**
- **Migration of up to 750 pages**
- **Assistance with associating existing content to your new templates**
- Building a training handbook for the future

This approach works. You launch your website according to your plans without you having to do the heavy lifting and can immediately take the lead on management, maintenance and user adoption.

Call for pricing

Kickstarter Standard Bundle includes the services listed above, along with Percussion CM1 Core Server License, Coach to Live, and unlimited support and maintenance for 1 year following purchase.
